Desktop Clock Plus-7 Free Download is a simple to use application that displays an analogue clock on your desktop, so you may easily check the time. The tool can easily be resized and relocated, in order to make it more convenient for you to view the exact time. Moreover, it can stay on top of other windows or hide. Simple time measuring application Desktop Clock Plus-7 displays a simple, yet stylish clock on your desktop so you may easily view the exact time, whenever you need to. The clock can be resized, to fit your requirements: for instance, you can enlarge it and have it hide under other windows or keep it to a small size and always on top. Its interface is simplistic, visually appealing and does not contain flashy colors, so it does not distract you while you are working. Moreover, the tool is useful for those users who sit further away from the monitor or who cannot view the time in the system tray. Customizable clock tool Right-click on the surface of the clock prompts the context menu with all the settings. You may increase the widget's size, little by little or set it to maximum with only one click. Similarly, you may reduce it or select the minimum option. Moreover, you can choose to enable/disable the third clock hand, which indicates the seconds, from the Options window. The other settings include set the clock to stay always on top or automatically start, with Windows. You may return to the initial settings by clicking Set to default button. Keyboard shortcuts Desktop Clock Plus-7 features two keyboard shortcuts, for quick clock customization. You may use the specified key combinations in order to increase or decrease the size of the clock, without accessing the context menu. This simple, yet stylish clock can be a convenient tool for any end-user.70 F.3d 1492 316 U.S.App.D.C. 79 NOTICE: D.C. Circuit Local Rule 11(c) states that

What's New in version 5.3.0: Updates of DirectX to version 11 Widgets are now updated to the latest available version of the application Additional help section added Check out the latest version 5.3.0 of Desktop Clock Plus-7 from the link below.The present invention relates to an adjustable support, and more particularly to an adjustable support having two spherical members for connecting the support to a wall. There are many patents that disclose various wall-mounted supports, such as those disclosed in U.S. Pat. Nos. 2,641,513, 4,846,491, 5,077,023, and 5,221,056. In these patents, the supports are complicated to manufacture and install. There is a need for a simple, yet sturdy wall-mounted support. The principal object of the present invention is to provide a simple, yet sturdy wall-mounted support. Another object of the present invention is to provide a wall-mounted support having two spherical members that are rotated relative to each other to fix the support to a wall. In keeping with these objects and others which may become apparent, the present invention relates to an adjustable support for a pair of spherical members, which includes a plate connected to the spherical members. The plate has a center line and the spherical members have a pair of axial holes for receiving screws or bolts and nuts to hold the spherical members in a fixed position relative to the plate. One of the spherical members has a threaded hole for receiving a screw or bolt and nut to hold the support in a first position relative to the plate. In a second position, the second spherical member is rotated relative to the first spherical member so that the second spherical member is axially offset from the center line. Other objects, advantages and novel features of the present invention will become

The software makes it quick and easy to keep an eye on the current time, whether you are sitting at your desk or working on the go. It has a simple yet aesthetically-pleasing interface and works with no additional software. The present invention relates generally to containers for holding a plurality of receptacles and, more particularly, to a container and receptacle ensemble wherein the receptacles may be easily supported so as to prevent spillage or drainage from the receptacles. Various containers have been designed in the past for the purpose of holding a plurality of receptacles, such as jars, bottles, containers, or the like. Many of these containers are designed for the purpose of holding a wide variety of items, as exemplified by U.S. Pat. No. 3,871,544. Other containers are designed specifically for the purposes of holding a plurality of receptacles, such as U.S. Pat. No. 4,521,935. Still other containers have been designed specifically for use as container trays and, as illustrated in U.S. Pat. No. 3,851,477, as tray covers. Containers for the storage and transport of a plurality of items, particularly receptacles, have also been designed in the past, as exemplified by U.S. Pat. No. 4,556,180. However, these containers suffer from the defects of being difficult to use in that the receptacles are difficult to support in a vertical and horizontal plane during the loading and unloading of the receptacles, and when nested one within the other. Still further, containers for the storage and transport of a plurality of items are typically not designed to prevent spillage or drainage from the items stored in the container. Such spillage and drainage are disadvantageous because the items may become damaged or the contents may spill onto one another, and such items may require cleaning to remove such matter therefrom. Accordingly, the present invention provides a container which holds a plurality of receptacles and, more particularly, a container which holds a plurality of beverage receptacles. The container has a support frame and support walls which define a plurality of receptacle-receiving compartments. The support walls may be connected to the frame so as to define an open top receptacle-receiving compartment. In addition, a plurality of receptacles may be stored in a lower-receiving receptacle compartment. The present invention further provides a plurality of beverage receptacles. Each beverage recept
